

Kubernetes Project-1 Deploying a Flask Application on Kubernetes with Auto-Scaling & Load Testing

STEP-1. Building & Containerizing the Flask Application

```
Activities Workstation Master Worker1 Worker2
master@master-vm: ~/Desktop/flask-kube

Reinitialized existing Git repository in /home/naster/Desktop/flask-kube/.git/
naster@master-vm:~/Desktop/flask-kube$ ls
app.py deployment-service.yaml Dockerfile README.md requirements.txt
naster@master-vm:~/Desktop/flask-kube$ git clone https://github.com/Bhargavakulla/flask-kube.git
Cloning into 'flask-kube'...
remote: Enumerating objects: 15, done.
remote: Counting objects: 100% (15/15), done.
remote: Compressing objects: 100% (12/12), done.
remote: Total 15 (delta 3), reused 0 (delta 0), pack-reused 0 (from 0)
Unpacking objects: 100% (15/15), 5.17 KiB | 529.00 KiB/s, done.
naster@master-vm:~/Desktop/flask-kube$ docker build -t bhargavakulla/flask-kube .
DEPRECATED: The legacy builder is deprecated and will be removed in a future release.
Install the buildx component to build images with BuildKit:
https://docs.docker.com/go/buildx/

Sending build context to Docker daemon 159.2kB
Step 1/7 : FROM python:3.11
3.11: Pulling from library/python
155ad54a8b28: Pull complete
8031108f3cda: Pull complete
1d281e50d3e4: Pull complete
447713e77b4f: Pull complete
441749a24fb5: Pull complete
ae604eab20d6: Pull complete
672d84e58157: Pull complete
Digest: sha256:68a8863d0625f42d47e0684f33ca02f19d6094ef859a8af237aaf645195ed477
Status: Downloaded newer image for python:3.11
--> 78553a4d82cb
Step 2/7 : WORKDIR /app
--> Running in d55b712c6e05
--> Removed intermediate container d55b712c6e05
--> bfc2879be1f3
Step 3/7 : COPY . /app
--> cfb89a59692d
Step 4/7 : RUN pip install --no-cache-dir -r requirements.txt
--> Running in 72e28ef54e90
```

STEP-2. Deploying Flask App on Kubernetes

```
Using default tag: latest
The push refers to repository [docker.io/bhargavakulla/flask-kube]
ed2d2de7e13d: Pushed

20a9b386e10e: Mounted from library/python
f8217d7865d2: Mounted from library/python
01c9a2a5f237: Mounted from library/python
latest: digest: sha256:c1654c6c11816344e2656ed12cde2f737465c81dc39ac3eb895a14bc0e52a8a8 size: 2422
naster@master-vm:~/Desktop/flask-kube$ kubectl apply -f deployment-service.yaml
deployment.apps/flask-app created
service/flask-service created
```

STEP-3. Fixing Docker Hub Rate Limits (Authentication Issue)

```
master@master-vm:~/Desktop/flask-kube$ kubectl create secret docker-registry docker-secret \
> --docker-server=https://index.docker.io/v1/ \
> --docker-username=bhargavakulla \
> --docker-password=Bharu@12345 \
> --docker-email=bhargavaramcloud@gmail.com
secret/docker-secret created
```

STEP-4. Installing & Troubleshooting Metrics Server

```

master@master-vn:~/Desktop/flask-kube$ kubectl patch serviceaccount default -p '{"imagePullSecrets": [{"name": "docker-secret"}]}'
serviceaccount/default patched
master@master-vn:~/Desktop/flask-kube$ kubectl apply -f https://github.com/kubernetes-sigs/metrics-server/releases/latest/download/components.yaml
serviceaccount/metrics-server created
clusterrole.rbac.authorization.k8s.io/system:aggregated-metrics-reader created
clusterrole.rbac.authorization.k8s.io/system:metrics-server created
rolebinding.rbac.authorization.k8s.io/metrics-server-auth-reader created
clusterrolebinding.rbac.authorization.k8s.io/metrics-server:system:auth-delegator created
clusterrolebinding.rbac.authorization.k8s.io/system:metrics-server created
service/metrics-server created
deployment.apps/metrics-server created
apiservice.apiregistration.k8s.io/v1beta1.metrics.k8s.io created
master@master-vn:~/Desktop/flask-kube$

```

STEP-5. Enabling HPA (Horizontal Pod Autoscaler)

```

master@master-vm:~/Desktop/flask-kube$ kubectl autoscale deployment flask-app --cpu-percent=50 --min=3 --max=10
horizontalpodautoscaler.autoscaling/flask-app autoscaled
master@master-vm:~/Desktop/flask-kube$ kubectl get hpa
NAME          REFERENCE          TARGETS          MINPODS   MAXPODS   REPLICAS   AGE
flask-app     Deployment/flask-app  cpu: <unknown>/50%  3         10        0          3s
master@master-vm:~/Desktop/flask-kube$ kubectl run -it --rm busybox --image=busybox -- /bin/sh
If you don't see a command prompt, try pressing enter.
/ #
/ # ls
bin      dev      etc      home     lib      lib64    proc     root     sys      tmp      usr      var
/ # pwd
/
/ # echo "hi bhargav"
hi bhargav
/ # exit
Session ended, resume using 'kubectl attach busybox -c busybox -l -t' command when the pod is running
pod "busybox" deleted
master@master-vm:~/Desktop/flask-kube$

```

STEP-6. Load Testing & Debugging NodePort Issues

```

master@master-vm:~/Desktop/flask-kube$ wget -q -O- http://10.97.210.48:80
master@master-vm:~/Desktop/flask-kube$ kubectl get svc flask-service
NAME          TYPE        CLUSTER-IP      EXTERNAL-IP      PORT(S)          AGE
flask-service NodePort    10.106.68.34    <none>           80:32665/TCP     25m

```

STEP-7. Simulating Load for HPA

[illegible]

OUTPUT:

```
master@master-vm: ~/Desktop/flask-kube
flask-app-74b9cd7899-t55kx 1/1 Running 0 49m
load-generator 1/1 Running 0 33s
master@master-vm:~/Desktop/flask-kube$ kubectl get hpa
NAME REFERENCE TARGETS MINPODS MAXPODS REPLICAS AGE
flask-app Deployment/flask-app 1%/50% 3 10 3 48m
master@master-vm:~/Desktop/flask-kube$ kubectl get hpa
NAME REFERENCE TARGETS MINPODS MAXPODS REPLICAS AGE
flask-app Deployment/flask-app 1%/50% 3 10 3 56m
master@master-vm:~/Desktop/flask-kube$ kubectl get hpa
