CREATING A NEW SHELL SCRIPT

script1.sh

script2.sh

OUTPUT

```
srikar@528014aa64d7583:~$ touch script1.sh
srikar@528014aa64d7583:~$ chmod +x script1.sh
srikar@528014aa64d7583:~$ vi script1.sh
srikar@528014aa64d7583:~$ ./script1.sh
This is my first shell script
index.html  script1.sh  script2.sh  testfile
End of my shell script
srikar@528014aa64d7583:~$ vi script1.sh
srikar@528014aa64d7583:~$ ./script1.sh
This is my first shell script
index.html  script1.sh  script2.sh  testfile
End of my shell script
srikar@528014aa64d7583:~$ cat script1.sh
#This is a comment
echo This is my first shell script
touch testfile
ls
echo End of my shell script
srikar@528014aa64d7583:~$ vi script2.sh
srikar@528014aa64d7583:~$ chmod +x script2.sh
srikar@528014aa64d7583:~$ ./script2.sh
srikar
UST GLOBAL
